

Reinventing Assisted Living

Arcatron is building the next generation of devices to enhance lives of people with limited mobility and elderly care needs. Its range of wheelchairs make users independent, safe and dignified. Also, the products are designed to ease out the tedious, hectic jobs of the care-givers making it safer and hygienic.

Our mission is to advance global standards of assisted living and make it dignified and safer. Our motto "Purpose Driven Innovation" steers us to apply engineering and technology for making products aimed at solving unmet needs for focus segments. Products that will live up to our name "Arcatron", which alludes to 'accelerating wheels' and is a not so subtle nod to the Ark of Moses, which possessed unlimited power!

Reinventing Assisted Living

Arcatron Mobility is an award-winning company founded by engineers from National Institute of Technology, Calicut, whose perpetual passion has been "**Purpose Driven Innovation**". They make innovative products to fulfil the unmet needs for elderly and differently abled population with mobility impairments.

Arcatron Mobility was founded when the founders realized that there was a huge void left by technology on addressing the **fundamental needs** of the differently abled population. Something as basic as **accessing washrooms** was left out of innovation and thus the differently abled population struggled in silence while witnessing **humanity making plans to settle** on Mars. Arcatron is aiming to bridge this gap with the help technology to uplift people with mobility needs and make them more independent.

Arcatron's pursuit of dignified assisted living for all was acknowledged at the SURGE 2016 where they won the Best Startup award by Google India. The company was one of the winners in the Maharashtra Startup Week in June 2018. Their products have been used and liked by thousands of end users including Sahyadri Hospital in Pune, Pain and Palliative Care Centre Kerala; Renowned Hospitals from Mumbai including KEM, Nair, Sion, Cooper etc. The growth story of Arcatron has also been covered in leading media forums like Business Today, The Hindu, The Economic Times, TEDx etc

Reinventing Assisted Living

- ❖ The company has launched a range of bathroom assist devices to solve problems associated with using toilets for people with acute mobility challenges.
- ❖ The company has a focus on India's 1/3rd of 110 million+ elderly citizens needing assistance in carrying out activities of Daily Living (ADL's) like bathing, toileting, walking.
- ❖ Demand for mobility assistance is increasing due to the rapid rate of aging, spinal cord injuries and obesity. However, the mobility devices available in India are poor quality or unaffordable. Arcatron aims to fix this problem by building world-class mobility devices at affordable prices.
- ❖ Arcatron has a strong focus on IP and has filed several patents in India for their product line. They also have CE certificates for their products which is recognized as a mark of standard, not only in India but in most international markets.
- ❖ The company strongly believes in value creation by solving unmet needs of its focus consumers.
- ❖ Arcatron Mobility strives to remain focused on serving unmet needs in limited mobility and establish itself as one of the most trusted medical device companies in the world by 2024
- ❖ Arcatron Mobility has a vision to become domestic market leader in most competing categories and one of the world's most trusted medical device brands by 2024
